

GOBIERNO DEL
PRINCIPADO DE ASTURIAS

Other regional activities to integrate Transport-Energy

Natural Gas
Electricity
Intermodality

Open regional seaports to international routes

1. Connect with other hub seaports in UE.
2. Adapt infrastructures to future traffic needs.
3. Exploit and develop new business and added values from the existing natural gas infrastructure.

Train by LNG. First proof of Spain in Asturias. Some routes are not electrified

1. Reduce internal environmental impacts.
2. Reduce internal transport costs and increase the offer of services.
3. Offer alternatives to present transports services.

Electro-connect ACA (for UE sometimes called “Ciudad Astur”) with other metropolitan areas in Europe

1. The electrical corridor will permit the connection of the different urban areas in the northwest of the Iberian Peninsula between them and with European main corridors.
2. Asturias is offering a perfect living lab as road to proof some important concepts in mobility and electrical charge.
3. Other connections by train with Portugal or France are difficult due to orography, and intermodality with road and sea will offer a perfect joint to solve the transport needs.

Plans and strategies incorporated in Asturias in relation with transport and energy

1. Central Area planning.
2. Health and environmental strategy.
3. Research and Innovation Strategy for Smart Specialization.
4. Industrial Strategy.
5. Other documents.
